EXPERIENCES

Wiki Food

Food Operations & Management Platform

Built key business workflows for order processing, vendor and client management, and day-to-day food operations.

Al Nasser ERP

ERP System | Orders, Vendors & Clients Management

Developed core ERP workflows for managing the full order lifecycle, vendors, clients, operational records, and related business processes.

Taggz

AI-Powered Event Photo Discovery Platform

Built an AI-powered event photo platform that uses intelligent image matching to identify attendees and instantly surface their photos directly to them.

ERP System

EEC Group

Led a 7-developer team to boost system performance and restructure the database. Upgraded the ERP from Laravel 8 to 10, improving scalability and code quality. Migrated the system from shared hosting to VPS to enable queues and background jobs. Contributed to HR, Payroll, and Attendance modules with ZKTeco integration, delivering clean, efficient, and scalable solutions for growing business needs.

galvanization System

EEC Group

Improved and automated the factory operations system, streamlining daily production tracking and responsibility assignments. Built a smart module to calculate zinc consumption during galvanization, accurately determining net profit and production costs. Automated cost and client payment calculations, enabling real-time profitability insights. Enhanced reporting and data accuracy to support fast, data-driven management decisions.

ELM - Al-Drayb Al-Adly

Reyada

Developed and optimized a full course booking and management system for Al-Drayb Al-Adly. Built a user-friendly platform for scheduling, reservations, and training management. Implemented secure payments, automated notifications, and scalable Laravel + Vue.js backend solutions, ensuring smooth user experience and high performance.

ELM - Najiz CRM

Reyada

Worked as a Full Stack Developer on the ELM–Najiz CRM, enhancing lead, deal, and client management. Built and optimized features for lead tracking, duplicate detection, and deal workflows. Used Laravel and Vue.js to deliver a smooth UI and scalable backend. Contributed to REST APIs, system integrations, and data synchronization to boost productivity and reporting efficiency.

Sinbad

Sinbad

Worked on Sinbad using Laravel, Vue.js, Stancl Tenancy, and Laravel Jobs. Implemented a full multi-tenant architecture with isolated databases and custom subdomains. Used background jobs for large data migrations and batch processing to avoid timeouts. Solved challenges with dynamic connections and synchronization across tenants. Optimized large datasets and queries, ensuring high reliability, strong data isolation, and smooth multi-tenant performance.

LMS

AMIT learning

rebuild of AMIT Learning's CRM to LMS using Laravel, Microservices, Repository Pattern, Vue.js, and SCSS. Redesigned the database for flexibility and future scalability. Adopted microservices for better performance and maintainability. Enhanced security and optimized loading time by 35%. Added features like notifications and sales stage tracking, boosting efficiency. Built automated test suites, reducing issues by 40% and delivering a scalable, high-performance LMS.
